3 January 2026	DATE	95%	Visible	Matched transaction or generic date pattern
Arun	NAME	99%	Visible	User assigned existing entity.
Dr. Nisha Rao	NAME	99.8%	Visible	Full name with honorific, explicitly identified as a faculty advisor.
nisha.rao@fictionaluniv.edu	EMAIL	99.8%	Visible	Standard email address format, directly associated with a named person ('Dr. Nisha Rao').
fictionaluniv.edu	ORG	90%	Visible	Domain name used in a professional email address, strongly implying an organizational affiliation (university).

Independent Verification Guide

VEILiq is built on the principle of 'Trust No Box'. You do not need this application to verify that your data is safe.

1. Verify the Redacted Document

To mathematically prove that the sensitive text has been removed from the exported PDF, you can use standard command-line tools to extract the raw text layer:

```
pdftotext VEILiq_Redacted_123.pdf - | grep "Alexandra Davis"
```

If the command returns nothing, the text does not exist in the file.

2. Verify the Tamper-Evident Audit Log

This report card contains a SHA-256 cryptographic hash of all redaction decisions. If anyone alters this PDF to hide a mistake, the hash will instantly become invalid.

```
shasum -a 256 VEILiq_Trust_Report_123.pdf
```
